PROFESSIONAL SUMMARY

Full-Stack Software Engineer with 3+ years of experience building scalable production applications using Java, Spring Boot, React.js, and SQL. Experienced in microservices, event-driven architecture, payment systems, cloud deployments, and AI/RAG integrations using AWS, Kafka, Docker, and CI/CD.

TECHNICAL SKILLS

Languages: Java, JavaScript, SQL

Frameworks: Spring Boot, Spring MVC, Spring Data JPA, REST APIs, Microservices, Node.js

Frontend: React.js, Vue.js, HTML5, CSS3

Cloud & DevOps: AWS, Docker, GitHub Actions, CI/CD

Databases & Testing: MySQL, MongoDB, JUnit, Jest, Integration Testing, API Testing

AI & Testing: RAG, AWS Bedrock, LLM APIs, Vector Embeddings, Prompt Engineering, JUnit, Jest

PROFESSIONAL EXPERIENCE

Software Engineer

Feb 2025 - Present

Pertech Industries Inc.

- Develop and architect full-stack application features using Java, Spring Boot, Spring Data JPA, and React.js, building scalable backend services, REST APIs, and responsive user-facing functionality for production workflows.
- Design and implement RESTful APIs and microservices for authentication, user management, reporting, payments, third-party integrations, and AI-powered features across core application workflows.
- Optimized SQL queries, indexing strategies, and service-layer logic, reducing API response times by 40%, and improving database query performance for production workloads.
- Built a secure payment platform from the ground up, implementing backend services, REST APIs, webhook processing, and transaction lifecycle management supporting high-volume payment processing.
- Automated AWS cloud deployments using Docker and GitHub Actions CI/CD pipelines, reducing deployment time by 60% while improving release reliability and infrastructure security.
- Integrate LLM-powered services and external APIs into production workflows, developing backend integrations and data-processing logic that reduce manual operations.

Software Engineer

Jan 2023 – Dec 2024

Virginia Modelling & Simulation Centre (ODU)

- Built and maintained full-stack applications on AWS, translating requirements into scalable, production-ready software and supporting ongoing feature development.
- Designed scalable backend APIs and responsive React.js frontends, improving application performance by 35% through SQL query optimization, efficient data retrieval, and reusable component architecture.
- Developed a SARSA-based reinforcement learning model for autonomous RF navigation, improving navigation accuracy by 25%, while contributing to Agile development, automated testing, code reviews, and Zero Trust security practices.

Associate Software Engineer

Jan 2022 – May 2022

DAZN

- Engineered React.js frontend components and Node.js backend services within an event-driven microservices architecture, integrating Apache Kafka for real-time event processing and improving transaction success rates to 80%.
- Strengthened application security by implementing OAuth2, JWT authentication, role-based access control (RBAC), and secure token lifecycle management across distributed microservices.

EDUCATION

Old Dominion University — M.S., Computer Science **GPA: 3.8**

Vasavi College of Engineering — B.E., Electronics and Communication Engineering **GPA: 3.6**

RELEVANT PROJECTS

- **AI Resume Optimizer & ATS Analyzer** — Built and deployed a full-stack AI platform using React.js, Node.js, AWS, LLM APIs, vector embeddings, and semantic search to generate job-specific resume recommendations and ATS analysis.
- **Enterprise Knowledge & Incident Resolution Copilot** — Built a production-ready RAG platform using Java, Spring Boot, React.js, AWS Bedrock, OpenSearch, Kafka, and vector embeddings to retrieve grounded answers with source citations from technical documentation and incident reports.
